
Florida Department of Children and Families
Policy Paper on
Co-occurring Mental Health and Substance Abuse Disorders

Jeb Bush, Governor **Jerry Regier, Secretary**

LETTER FROM THE DIRECTORS

In its endeavor to treat the whole person and ensure the comprehensiveness and continuity of services to the people we serve, the Substance Abuse and Mental Health Program Offices of the Florida Department of Children and Families (DCF) are taking the initiative to improve the system of care for people with co-occurring mental health and substance abuse disorders. The goal is to foster a framework that is coordinated, integrated, and supportive to prevent a person from falling through the cracks of separate “parallel” systems of care. This document is an important step towards achieving this goal of a coordinated and integrated policy framework because both the Mental Health and Substance Abuse Programs are identifying joint issues, system goals and outcomes, and recommendations to implement the necessary action steps. Also, it identifies critical strategic action steps necessary to implement its vision of how the service delivery system should be organized in order to provide high quality, evidence-based services to the co-occurring disorders population in Florida. Most importantly, it draws on the research literature and the experience of other states and national experts.

The growing need for more effective treatment for those with co-occurring disorders prompt a rethinking of the current “parallel” systems. Therefore, this policy paper searched for and incorporated input from a diverse group of key stakeholders in Florida including trade associations, consumers and their family members, and advocacy groups. Several research findings underscored the importance of restructuring Florida’s substance abuse and mental health systems of care including:

- At least 10 million people in the U.S. have co-occurring substance abuse and mental health disorders.
- Up to 65.5% of those with a substance dependence disorder had at least one mental disorder and 51% of those with a mental disorder had at least one substance dependence disorder.
- The majority of people with co-occurring disorders typically receive treatment that only addresses one type of disorder which has been found to be less effective than integrated treatment of both types of disorders at the same time in the same setting.
- Individuals with co-occurring disorders typically have multiple co-occurring disorders and problems, and as a group have high rates of physical illness, death, unemployment, homelessness, and criminal justice involvement that often lead to greater costs for public services.
- Clients with co-occurring disorders are more likely to drop out of outpatient mental health and substance abuse treatment programs and have poorer outcomes in these systems than clients with a single type of disorder. They are often high users of expensive hospital and inpatient services due to the severity of their disorders and the frequency of their crises that leads to increase public costs.

It is our hope that the Florida Department of Children and Families' Policy Paper on Co-occurring Mental Health and Substance Abuse Disorders is used as an impetus to carry out the suggested strategic action steps and promote continued cooperation among all stakeholders towards an improved service delivery system to those with co-occurring disorders. We pledge our leadership to advance this important work.

Sincerely,

Kenneth A. DeCerchio, MSW, CAP
Director
Substance Abuse Program

Celeste Putnam, MS
Director
Mental Health Program

Acknowledgement

The authors would like to thank the joint Workgroup on Co-occurring Disorders of the Florida Alcohol and Drug Abuse Association (FADAA) and the Florida Council on Community Mental Health (FCCMH) for reviewing the document and offering their useful suggestions, especially the following individuals: Mark Engelhardt of the Louis de la Parte Florida Mental Health Institute/University of South Florida; John Daigle, Executive Director of the Florida Alcohol and Drug Abuse Association; Randy Wilcox and Karen Koch of the Florida Council on Community Mental Health; Mary Ruiz, CEO of Manatee Glens and Chair of the Workgroup, and Deborah Orr of the Center for Drug Free Living. We would also like to thank Phil Emenheiser of the DCF Substance Abuse

Policy Paper on

Co-occurring Mental Health and

Substance Abuse Disorders

***GUIDING QUESTION**: "If I were an individual with co-occurring mental health and substance abuse disorders in Florida, what type of service delivery system would best meet my needs?"*

PURPOSE

BACKGROUND

- **10 million people in the U.S. have co-occurring substance abuse and mental health disorders**

- **up to 65.5% of those with a substance dependence disorder had at least one mental disorder, and 51% of those with a mental disorder had at least one substance**

dependence disorder. These percentages tend to be even higher in clinical treatment settings, especially in public mental health and substance abuse treatment settings.

- **clients with co-occurring disorders should be the "expectation, not the exception,"**

- **The majority of people with co-occurring disorders receive no treatment . Treatment that is received typically only addresses one type of disorder, which has been found to be less effective than integrated treatment of both types of disorders at the same time in the same setting.**

- **multiple co-occurring disorders and problems , which often lead to greater costs for public services**

-

leading to increased public costs

-

-

Additional Action Steps- Minkoff's 12 Steps of Implementation of CCISC Model

Attachment A

COMPREHENSIVE, CONTINUOUS, INTEGRATED SYSTEM OF CARE (CCISC) MODEL

Principles

1. Dual diagnosis is an expectation, not an exception.

2. All ICOPSD are not the same; the national consensus four quadrant model for categorizing co-occurring disorders (NASMHPD, 1998) can be used as a guide for service planning on the system level.

3. Empathic, hopeful, integrated treatment relationships are one of the most important contributors to treatment success in any setting; provision of continuous integrated treatment relationships is an evidence based best practice for individuals with the most severe combinations of psychiatric and substance difficulties

4. Case management and care must be balanced with empathic detachment, expectation, contracting, consequences, and contingent learning for each client, and in each service setting.

5. When psychiatric and substance disorders coexist, both disorders should be considered primary, and integrated dual

6.

2. Formal Consensus on CCISC Model

3. Formal Consensus on Funding the CCISC Model

4. Identify Priority Populations and Focus of Responsibility for Each

5. Develop and Implement Program Standards

6. Structures for Intersystem and Inter-Program Care Coordination

10. **Develop Basic Dual Diagnosis Capable Competencies for all Clinicians**

11. **Implement a System Wide Training Plan**

d. Continuum of levels of care:

CCISC implementation requires a plan that includes attention to each of these areas in a comprehensive service array.
